Doug,

I recommend directing that question to the relevant agency, I believe UDOGM in this case. It is up to that agency to determine if nearby inventories can serve as identification efforts for a different area. I am happy to consult with UDOGM on that question.

Good luck,

Matt

Western Rock has contacted the BLM who have done arc studies on all the surrounding properties (as a part of a property exchange) with the exception of the private property in Sections 21 & 22. They have found nothing in all their studies. Western is wondering if the BLM studies of surrounding areas would suffice for their area. The Western mining project is located in Sections 21 & 22, T35S, R12W. Thanks for your attention to this matter.

Doug

Understanding this better, I concur
w. on your decision.
